

## Pinwheel instructions:

1. Cut out the square shape
2. Carefully cut along the 4 lines toward the centre of the square
3. Take the first corner into the centre and glue down
4. Do the same with the other three corners so that all four corners are stuck down at the centre
5. Carefully use a pin to push through the centre of the pinwheel. Wiggle the pin a little to widen the hole slightly.
6. Then carefully stick the push pin into a pencil or other suitable stick (a chopstick would work a plastic straw might not be strong enough.)

Blow on the pinwheel to make it turn or take it outside and see the wind make it turn.
